n relates to isolated polynucleotide (I) and polypeptide (II) is useful as hybridisation probes, polymerase chain R) primers, oligomeras, and for chromosome and gene mapping, binant production of (II). The polynucleotides are also used as as expressed sequence tags for identifying expressed used to the production of (II) and disease states involving (II). (II) is enerating antibodies against it, detecting or quantitating a in tissue, as molecular weight markers and as a food (II) and its binding partners are useful in medical imaging ressing (II). (II) and (II) are useful for treating disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             errant protein expression or biological activity. The and polynucleotide sequences have applications in forensics, gene mapping, identification of mutations for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                e other types of data and products dependent on DNA and equences. AAS64197-AAS94564 represent novel human diagnostic noes of the invention. Note: The sequence data for this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ot appear in the printed specification, but was obtained in prmat directly from WIPO at 'pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 polynucleotide and encoded polypeptides, useful in forensics, gene mapping, identification of mutations for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ID NO 20711; 103pp; English.

```
The invention relates to recombinant carcinoma associated (CA) n acid sequences from mouse and human (ADA01482-ADA03094), and to recombinant carcinoma associated proteins (CAP) encoded by them. invention also encompasses expression vectors and host cells compise to the protein, and a biochip comprising CA nucleic acid of binds to the protein, and a biochip comprising CA nucleic acid of fragments thereof. The sequences of the invention were identified oncogenic retroviruses, which insert into the genome of the host oncogenic retroviruses, which insert into the genome of the host oncogenic retroviruses, which insert into the genome of the host oncogenic ransacting viral genes, meaning that cancer inciden direct consequence of the effects of proviral integration into he protoncogenes. The CA nucleic acid sequences can be used to dia carcinoma despecially breast cancer, prostate cancer, lymphoma of leukaemia) or a propensity to carcinoma by determination of the of a CA gene, or by determination of CA gene expression in particities and in screening and evaluating drug candidat present sequence represents a specifically claimed murine CA nucleic sequence of the invention. Note: The complete sequence data for sequence of the invention.
                                                                                                                                                                                                  New recombinant nucleic acid encoding carcinoma associated prote useful for preparing compositions for treating carcinomas.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           sequence of the invention. Note: The complete sequence data for patent did not form part of the printed specification, but was on a electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             mouse; ss; cytostatic; gene therapy; vaccine; carcinoma; lymphom

The invention relates to recombinant carcinoma associated (CA) nu acid sequences from mouse and human (ADA01482-ADA03094), and to recombinant carcinoma associated proteins (CAP) encoded by them. Invention also encompasses expression vectors and host cells composed to a polypeptide (especially an antibody) that specific binds to the protein, and a biochip comprising CA nucleic acid or fragments thereof. The sequences of the invention were identified oncogenic retroviruses, which insert into the genome of the host concogenic retroviruses, which insert into the genome of the host oncogenic retroviruses, which insert into the genome of the host oncogenic retroviruses, which insert into the genome of the distribution of the gathogenic trans-acting viral genes, meaning that cancer incidence direct consequence of the effects of proviral integration into host protooncogenes. The CA nucleic acid sequences can be used to diagraction a propensity to carcinoma by determination of the second consequence acids, protecting and antibodies are also useful therapeutic agents and in screening and evaluating drug candidates between sequence represents a specifically claimed murine CA nucleic sequence of the invention. Note: The complete sequence data for the patent did not form part of the printed specification, but was obt in electronic format directly from MIPO at the printed pot sequences.
        recombinant nucleic acids are useful for screening for drug candifor diagnosing or treating carcinomas. Sequences given in ADC8521 ADC85514 represent CA genes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Mouse, murine, carcinoma associated, oncogene, carcinoma, cancer, prostate, lymphoma, leukaemia, cytostatic, gene therapy, drug scr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New recombinant nucleic acid encoding carcinoma associated proteiuseful for preparing compositions for treating carcinomas.

A polynucleotide of the invention has cytostatic may have a use in gene therapy, or in a vaccine. The ucleic acids and polypeptides are useful for treating 9. lymphomas, cancers, neoplasm, adenocarcinoma, and present sequence represents a mouse mRNA of the invention.

unt nucleic acid, useful for treating carcinomas, lymphomas, olasm, adenocarcinoma, or sarcomas.

ID NO 559; 2304pp; English.

Trelates to a novel recombinant nucleic acid comprising a squance selected from any of the 660 sequences fully defined lication. A polymucleotide of the invention has cytostatic in may have a use in gene therapy, or in a vaccine. The nucleic acids and polypeptides are useful for treating and polypeptides are useful for treating by.g. lymphomas, cancers, neoplasm, adenocarcinoma, and present sequence represents a mouse gene of the invention.

The invention relates to a recombinant nucleic acid comprising a nucleotide sequence selected from any of the fully defined carci associated (CA) genes from the 50 tables given in the specificat CA proteins are secreted, transmembrane or intracellular protein recombinant nucleic acids are useful for screening for drug cand for diagnosing or treating carcinomas. Sequences given in ADC852 ADC85514 represent CA genes of the invention.
                                                                          Cytostatic; gene therapy; vaccine; cancer; carcinoma-associated secreted; transmembrane; intracellular; ds.
                                                                                                                                                                                                                                                                                                                                                               New recombinant nucleic acid comprising a nucleotide sequence the carcinoma-associated (CA) genes, useful for screening for candidates for diagnosing or treating carcinomas.
                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 1; SEQ ID NO 259; 983pp; English

                      by proteolytic processing.
-!- SIMILARITY: Belongs to the tumor necrosis factor family.
-!- CAUTION: Ref. 3 sequence differs from that shown due to a frameshift in position 125.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      87.7%; Score 249; DB 1; Length 249; 100.0%; Pred. No. 2.9e-232;
  PTM: The soluble form derives from the membrane form
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              EXTRACELLULAR (POTENTIAL).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               on of a ligand for the death-domain-containing receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              JAR LOCATION: Type II membrane protein and secreted. PECIFICITY: Highly expressed in adult heart, pancreas, muscle, brain, colon, small intestine, lug, ovary, spleen, lymph node, appendix and peripheral blood. Test. Low expression in kidney, testis, liver, placenta, of bone marrow. Also detected in fetal kidney, liver,

```
Fm. J. Phys. Anthropol. 121:67-80(2003).

-!- FUNCTION: Receptor for MSH (alpha, beta and gammA) and ACTH.

-creativity of this receptor is mediated by G proteins which act
adenylate cyclase (By similarity).

-!- SUBCELLULAR LOCATION: Integral membrane protein.

-!- SIMILARITY: Belongs to family 1 of G-protein coupled recepto:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This SWISS-PROT entry is copyright. "Genomic organization and polypeptide primary structure of zona pellucida glycoprotein hzp3, the hamster sperm receptor.";

Dev. Biol. 142:414-421(1990).

-!- FUNCTION: Functions as a sperm-receptor. It is responsible for sperm-adhesion to the zona pellucida, and may contribute to th sperm-adhesion to the insemination.

-!- SUBUNIT: ZP3 FORMS WITH ZP1 AND ZP2 THE ZONA PELLUCIDA, IN WHICH ZP2 AND ZP3 COMPLEX INTO COPOLYMERS CROSS-LINKED BY ZP1-
-!- SUBCELLULAR LOCATION: Type I membrane protein. Extracellular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

# srnative splicing; Named isoforms=2; 36269-1; Sequence=Displayed;

Jeukotrieme metabolism; second step.

Heterodimer composed of the light and heavy chains.

Site is located in the light chain (By similarity).

REDCATION: Type II membrane protein (By similarity).

REPRODUCTS:

ACTIVITY: (5-L-glutamyl)-peptide + an amino acid = 5-L-glutamyl-amino acid.

36269-2; Sequence=VSP 008146; experimental confirmation available; Y: Belongs to the gamma-glutamyltransferase family. Ref.2 sequence differs from that shown due to a c in position 446.

MEDLINE=93144699; PubMed=7678765; MEDLINE=9314699; PubMed=7678765; Madchi T., Izumi H., Yamada T., Tanaka K., Takeuchi S., Adachi T., Izumi H., Yamada T., Tanaka K., Matsuda T.; Ramanura R., Matsuda T.; Research T., Tanaka T., Matsuda T.; "Gene structure and expression of rice seed allergenic proteins belonging to the alpha-amylase/trypsin inhibitor family."; Plant Mol. Biol. 21:239-248(1993).

-1- PTM: Five disulfide bonds are present (By similarity).
-1- ALLERGEN: Canaes an allergic reaction in human.
-1- SIMILARITY: Belongs to the cereal trypsin/alpha-amylase inhik
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ö
